Solutions made of solid surface material (DuPont™ Corian®, LG HI-MACS®)

Solid surface material is hard-wearing and offers a wide range of design possibilities, perfect functionality and durability. Mineral material is beauty, warmth, colour and depth and inspires the daily work. In addition, the material offers almost unlimited creative freedom. Functionality and aesthetics complement each other in an ideal way. The jointless bonding of the individual components ensures maximum hygiene at all times - whether as kitchen worktop, bar table, cupboards, floor or wall panelling and much more.

The material material can be supplied in different colours. Both price and delivery times have to be taken into account in deviation from Snow-White.

<p>Cube – Quadro 40x40 cm:</p> <p>Operating height 92.5 cm, incl. installation Ice-Chiller, with 2 meter gas pipe. Price without gas cylinder.</p> 	<p>2.890,00 EUR</p>	
<p>Cube – Circle Ø 40 cm:</p> <p>Operating height 92.5 cm, incl. installation Ice-Chiller, with 2 meter gas pipe. Price without gas cylinder.</p> 	<p>2.990,00 EUR</p>	
<p>Rack 92,5x40x40 cm:</p> <p>Operating height 92.5 cm, with drip off edge at the top plate.</p>	<p>1.790,00 EUR</p>	

The furniture/devices have a delivery time depending on the quantity ordered and the production time. As a rule is from min. 3 weeks to go out. The prices are exclusive of shipping and plus the valid VAT.

Conditions, prices can be agreed with our team.

Ice-Chiller is a product of Ice-Chiller Deutschland GmbH and is marketed by chance-N GmbH within the framework of Innovation Scouting.

Solutions made of solid surface material (DuPont™ Corian®, LG HI-MACs®)

- **Material:**
Solid surface material, consisting of approx. 2/3 alabaster stone flour (aluminium hydroxide) and approx. 1/3 high quality acrylic resin and colour pigments.
- **Resistant to wear:**
Highly impact-, scratch- and wear-resistant, lightfast and flame-retardant. Resistant to a wide range of household chemicals (also suitable for laboratories, kitchens and restaurants)
- **Homogeneous and waterproof:**
Colours and patterns are uniformly structured throughout the entire thickness of the material and do not wear out. The material is waterproof and non-swelling.
- **Hygienic:**
As it is a non-porous material, neither bacteria nor mould can penetrate. The surface is easy to clean and safe for food (according to recommendation XII BGA).
- **Seamless:**
Sinks and washbasins (made of the same material/decor) can be glued virtually seamlessly to the work surface. Panel joints are joined on site with hardly visible joints.
- **Thermoplastic mouldable:**
Mineral material can be thermoformed at controlled temperatures. This allows us to offer a wide range of moulded parts (cylinders, sinks, washbasins, etc.) and individual special shapes.
- **Can be worked and processed like wood:**
Commercial woodworking equipment can be used for processing.
- **Repairable:**
Slight signs of wear (scratches) can be removed with scouring milk. Heavy damage can be repaired by a qualified technician by grinding or milling.
- **The mineral material of our supplier:**
The high-quality mineral material, which has been used for many years, is available in over 35 decors, can be processed at short notice and is available in 6,9 and 12 mm material thickness, depending on the décor.
